## SUMMARY

Technical Program Manager with 15+ years of experience leading large-scale programs in the tech industry: global identity migration across 10+ apps, design-system adoption from 0 to 70+ products, and AI automation improving team efficiency, increasing productivity and reducing resourcing needs.

## SKILLS SUMMARY

---

- **Program management:** Agile/sprint methodology, metrics analysis, stakeholder management and expectation alignment; app and product development for medium and large software projects in the US, Canada, and Europe.
- **Technologies:** iOS, Git, AWS, CSS, Jira/Confluence, AI agents, GenAI tools, LLM-based automation; mobile/web app development, UI design, privacy risk management, data analysis.
- **Programming:** Java, C#, Swift, AngularJS, Python.

## EDUCATION

---

University of Waterloo

Waterloo, ON

*Honors Bachelor of Computer Science, Business Option, Co-op Program*

*2007 – 2012*

## WORK EXPERIENCE

---

Meta Platforms Inc.

Seattle, WA

*Technical Program Manager – Growth, Core Product*

*May 2021 – Present*

- Led the global launch of the migration from multiple linked accounts to one account with multiple profiles across four organizations — partner point-of-contact, created staged rollout plan, and ran central launch command with war-room operations, preemptive incident mitigation, and on-call layering across 11 workstreams — shipping with top-tier metrics neutral, zero rollbacks, and no single-team dependency able to block the release.
- Drove adoption of a new design system from 0 to 70+ products in under 2 years — launching the first 5 onboarded products and proving benefits and efficiencies to partner teams.
- Leading the delivery of 4 concurrent programs in centralizing user settings across all Meta apps and platforms (Facebook, Instagram, Meta Quest, WhatsApp) and working with cross-functional teams to launch globally to +2 billion users.
- Ran road mapping, capacity planning, and sprint planning across 5 teams for the cross-app design system — prioritizing work, delivering components and frameworks, and providing technical support with clear leadership visibility into priorities and resource allocation.
- Built a scalable intake process for partner engagement with the Meta Account — consolidating two separate intake processes into one system with scoped request forms and impacted-surface capture — triaging 45+ requests across six product surfaces as the platform scaled toward 30+ integrated apps.
- Ran daily command-center operations holding workstream leads to milestone commitments and led a risk-based defect burndown with program-wide prioritization — escalating an emerging critical-path risk before it became blocking — keeping testing and staged-rollout phases on schedule.
- Authored the program's defect management plan — tagging schemas, production operations workflows, and in-app bug-reporting integration — creating a repeatable system to classify and clear multi-hundred-issue backlogs ahead of each launch gate.
- Deployed multiple AI agents that eliminated recurring manual work: an intake triage agent that auto-resolves the majority of incoming requests (handling time cut from 15–30 minutes to under 30 seconds) and a bug classification agent covering 18 product categories with content-based detection — scaling high-volume intake and defect inflow without added headcount.
- Owned the account management integration into the launch for Vibes app — requirements definition, 10+ partner teams, iOS/Android account-flow test sprints, and daily status in the program tracker — then extended the launch framework to a second app and drove its last-minute addition into the release with a three-week quality sprint that closed ~60 blocking defects across multiple products.

## **Amazon Inc.**

**Seattle, WA**

### ***Technical Program Manager – Customer Delivery Experience***

***Sept 2019 – May 2021***

- Led the delivery of a large-scale migration project of the top three most trafficked pages on Amazon's retail website, making the website more efficient and reducing page load times by 30%.
- Worked with more than 10 external teams simultaneously to commit and implement feature upgrades and migration to customer facing delivery tracking pages.
- Created and managed a worldwide tax and consumer protection compliance project impacting customer facing pages on Amazon's retail website, simplifying the price breakdown for products at checkout.
- Created the system design architecture for a new service and API that would show a customer's order total breakdown across all pages on the retail website.
- Owned, maintained and improved the delivery experience intake process which interfaces with over 100 teams across Amazon to allow for integration of features into customer-facing properties owned by our team including new products, features and marketplaces.
- Created and maintained the yearly and quarterly team plan for the Your Orders team to prioritize goals, plan resourcing needs and report updates to the organization leadership team.
- Led the sprint planning sessions for the Your Orders team and worked with SDMs to prioritize, track and report on progress, velocity and effectiveness of team sprints.
- Worked with SDEs to capture team feedback and retrospectives on how to constantly improve efficiency, collaboration and visibility across the team.

## **Deloitte Digital**

**Toronto, ON**

### ***Manager / Senior Consultant – Systems Integration***

***Jan 2015 – Sept 2019***

- Led the front-end engineering team in Canada building modern web and mobile applications (AngularJS, React, iOS, Android), and engaged new clients with business strategy recommendations to define digital solutions.
- Development lead and solution architect for iOS/iPad applications for large Canadian oil & gas and utility clients, an Angular web application for online retail mortgage purchases, and a wealth management web application.
- Development lead integrating multiple ERP systems into a supply chain optimization engine; built an iOS Apple Watch executive-communications app and an AngularJS ServiceNow portal managing 1B+ assets for a technology client.

## **TD Bank**

**Toronto, ON**

### ***Mobile Solution Architect – Direct Channels Technology Solutions***

***Sept 2012 – Dec 2014***

- Developed UML artifacts and views to support architectural deliverables leveraging TD's technology and Business reference models. Drove discussions with architects and SMEs to build a technology reference model that simplified, standardized, and governed technology — partnering with project teams to align architectural and design best practices within budget, timeline, and technology constraints.
- Worked with Networking and Operations team to deploy Cloud POC hardware into Datacenter to evaluate performance and capabilities for vendor selection.
- Contributed to architecture design decisions for TD's Mobile Wallet platform, and created a series of artifacts for the Mobile Payments project including Architectural Risk and Governance assessment, Service Dependency diagrams and Sequence diagrams.
- Created assessment of options by conducting multiple discussion sessions with delivery managers to improve delivery processes in Direct Channels as part of the Deliver Model Optimization program.
